

**Key words**

Life processes	Breathing, eating, drinking – processes all living things must do to survive.
Habitats	An area where living organisms (animals, plants) might live.
Microhabitats	Small habitats where minibeasts live.
Adaptation	Differences animals have to make them suitable to their habitats.

Living organisms have **adapted** to their habitats.

**Habitats**

Habitats must provide everything a living organism needs to survive. A good habitat is suitable for any organism which might live there. There are lots of different habitats all around the world.

**Living**

This creature is still alive and using life processes.

**Non-living**

This creature was once alive, but is no longer using life processes

**Never alive**

This item has never been alive or used life processes.

**Microhabitats**

Many minibeasts like to live in microhabitats.

Food chains show the order in which energy is transferred from one living organism to another. The grass gives energy to the rabbit which gives energy to the fox when they are eaten.

**Food Chain**
